

Graphileon and PranaGEO sign partnership in product development.

Wageningen (Netherlands) - Bodrum (Turkey), 20 June 2017 - Graphileon and PranaGEO signed today an agreement to partner in the development of InterActor, a Graphileon product.

PranaGEO will strengthen the team of Graphileon with experienced software developers to expand the product functionality of Interactor. PranaGEO will investigate possibilities of incorporating the functionality of Interactor and the Neo4j graph database in their VisualR product.

About Graphileon

Graphileon is specialized in advanced user interfaces on graph-databases and highly interactive graph-driven dashboards, their preferred graph database is Neo4j. Tom Zeppenfeldt, founder of Graphileon, has extensive international experience in the design and development of flexible platforms that enable companies to benefit from the latest developments in database technologies. Graphileon's InterActor product currently supports use-cases in various fields, including : fraud-detection, semantic product data management, project(logic) management and master data management.

About PranaGEO

PranaGEO is a Research and Development company that enable customers to build flexible geospatial IT projects which use data visualization and analysis that are critical to analyzing and gaining insight into their data for environmental, finance, agriculture and energy sectors. PranaGEO CEO Gert Kroon sees this partnership as an excellent step towards extending the functionality of PranaGEO's VisualR and improving the company's professional experience of Neo4j graph datasets.
